HISTAMINE ELIMINATION BY ELISA

YOUR PERSONALIZED REPORT

HISTAMINE ELIMINATION

IMMUNE RESPONSE	Result	Reference
Histamine Clearance Index	50.0 	> 25.0 %

The Histamine Clearance Index™ measures how effectively histamine is eliminated by comparing histamine levels in blood when its primary degrading enzyme (DAO) is active versus when it is inhibited. Results are reported as a percentage, where lower values indicate reduced histamine clearance, and higher values reflect more efficient breakdown.
